Abstract

This paper describes the manner in which papers should be formatted for papers adhering to the ACS series, Conference in Research and Practice in Information Technology. The abstract should be a maximum of 250 words and should clearly identify the content of the paper.

Keywords: As required..

1 Introduction

Normal text is 10 point, Times Roman in two columns. Page size is A4 with 0.8in borders on all sides, two columns with 0.2 in between them. There should not be a blank line between paragraphs. If the style is being used properly, a natural looking gap will be produced as L^AT_EX thinks fit.

Headings should use the heading styles as shown. Numbering is automatic.

2 Heading Level 1

2.1 Heading Level 2

2.1.1 Heading Level 3

Headings below level 3 should be avoided. Tables and figures should ideally be confined to one column but where this is not possible should be located at the top of a page. Each be given a caption using the caption style. For example,

Citations should use the author date format only. For example,

...as proved by Snodgrass (1987) and Fayyad et al. (1996) and referred to in other works (Ben-Zvi 1982, Bentley 1986, Agrawal et al. 1993) the process..., etc.

You can use the `\toappear` to add a footnote for grant and other information. We prefer the copyright notice to be the last on the page. `\toappear` looks better we think than the `\thanks` title option.

Conferences in Research and Practice in Information Technology (CRPIT), Vol. 48, Vladimir Estivill-Castro and Gillian Dobbie, Ed. Reproduction for academic, not-for-profit purposes permitted provided this text is included.

Figure Content

Figure 1: Caption

A basic, but much abused, rule for citations is that they should not be referred to as nouns. Eg. “(Snodgrass 1987) talks about” or “In (Snodgrass 1987), the process of ...” are both wrong. For further information regarding formats, please contact the editor-in-chief.

3 Submitting Camera Ready copy

Once your paper has been amended as required by the refereeing process, the paper, including if necessary the source, should be provided to the conference chair as required. Do not send a copy to CRPIT - this is the responsibility of the program chair alone. Note that only PDF and postscript files are the only acceptable formats. Do remember that CRPIT papers are A4, not US letter size (thus on the dvips you often have to specify `-t a4`) – see website.

Note that if errors in formatting are found they will need to be corrected before printing in extreme circumstances the paper will be left out of the volume. The most common errors in using this word template are:

1. Not having the correct margins – they are 0.8 inch all round.
2. Not using A4 paper format when creating the pdf file.

4 References

References should be in the standard author-date format, examples of which are shown below (shown is a conference paper, a thesis, a book, a book section and a journal paper in that order). The required formats can be obtained by including the *natbib* package and using style *agsm*. The files `natbib.sty` and `agsm.bst` are available at the CRPIT website. The *harvard* package, which is also available, can also be used as an alternative to *natbib*.
